Corporate Training Programme

Sep 25, 2026 · @Natcha

Programme summary

A full-day, on-site or remote workshop for a small group of engineers (up to 10), teaching TALO Engine's AI-directed MEP coordination workflow using the client's own BIM model and project data. By the end of the day, attendees can run the core AI-assisted tasks — spec search, model checking, schedule generation — themselves, with Natcha directing and troubleshooting throughout.

Who it's for: MEP engineers, BIM coordinators and design managers who will use or oversee the AI workflow day to day.

Format: Full day (9:30am–4:30pm), delivered in person or remote.

Outcome: The team leaves able to run the workflow independently, with a short written record of what was covered for reference.

Full-day agenda

Time	Session
9:30–10:00	Welcome and introductions — goals for the day, quick tour of the client's current workflow
10:00–11:00	Module 1: The orchestrator — how TALO's AI agents connect to their BIM model and tools
11:00–11:15	Break
11:15–12:30	Module 2: Spec search and model checking — hands-on, using the client's own project
12:30–1:15	Lunch
1:15–2:30	Module 3: Calculations and schedules — running the sizing and schedule agents live
2:30–2:45	Break
2:45–3:45	Module 4: Running it independently — attendees drive the workflow themselves, Natcha troubleshoots

Time	Session
3:45–4:30	Wrap-up, Q&A, and what's next

Learning objectives

By the end of the day, attendees can:

1. Explain how TALO's AI agents connect to their own BIM model and existing software.
2. Run a spec search and a model check against the project's own rules, using the AI agents directly.
3. Generate sizing options and draft schedules from the BIM model with the calculation and schedule agents.
4. Review and correct AI-generated output before it's issued, rather than accepting it uncritically.
5. Know who to contact and what to check when something in the workflow needs adjusting after the session.

Delivery and logistics

Group size	Up to 10 engineers
Delivery	In person at the client's office, or remote via video call and screen-share
Prerequisites	Working familiarity with the client's own BIM software; no AI experience needed
Client provides	Access to a live (or sandbox) project model, a room or call with screen-share for the group
TALO provides	Natcha's time, the configured AI agents for the session, a short written record of what was covered
Prep time	Scoped separately — depends on how much configuration the client's model needs before the session

Pricing guidance

Priced per session (flat), not per head — group size at this scale doesn't change delivery time much.

Full-day session	£2,000
Prep (if the model needs configuring beforehand)	Quoted separately, based on hours

This sits above generic public Revit/BIM training (~£180/day per person for a commodity course) because it's bespoke content, delivered directly by Natcha, built around the client's own AI-directed workflow rather than generic certification material.

Fee confirmed at a flat £2,000 for the session, group of up to 10.
